## DETAILED ACTION

1. Claims 1 – 20 are pending.

### ***Claim Rejections - 35 USC § 101***

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 14 – 19 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claims 14 – 19 appear to recite elements that can be implemented in software alone and are therefore rejected as software, per se. See MPEP 2106.01. It appears that the claims do not include hardware necessary to realize the functionality of the software. The claims are therefore rejected as being directed toward non-statutory subject matter.

3. Claims 1, 8 and 20 are interpreted as systems or method including the recited network and hardware required to implement the recited network.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 2194

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1, 8, 12, 14, 18 and 20 are rejected under 35 U.S.C. 102(b) as being anticipated by Ismael et al. (US Pat. 6,061,721; hereinafter Ismael).

5. As to claim 1, Ismael teaches a monitoring system comprising:

a cluster of application servers communicatively coupled on a network to serve applications over the network to a plurality of clients, each of the application servers comprising a plurality of server nodes (Fig. 1; col. 4 lines 20 – 60);

a plurality of MBean servers assigned to the plurality of server nodes (Fig. 3; col. 6 lines 10 – 30);

a plurality of runtime MBeans associated with specified resources on each of the plurality of server nodes and registered with one of the MBean servers, each of the runtime MBeans collecting and reporting monitoring data for its associated resource (col. 6 lines 10 – 30; col. 7 lines 6 – 23); and

cluster integration logic to compile resource data collected from each of the individual runtime MBeans via the MBean servers and to provide the compiled data in a predefined organizational structure to a management interface (col. 9 lines 10 – 43).

6. As to claims 8, 14 and 20, see the rejection of claim 1.

Art Unit: 2194

7. As to claims 12 and 18, Ismael teaches generating the monitor MBeans responsive to monitor configuration data stored within a central database (col. 13 line 19 – col. 14 line 2).

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claims 2 – 7, 9 – 11, 13, 15 – 17 and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ismael as applied to claims 1, 8, 14 and 20 above, and further in view of Wilson (US 2002/0029298 A1).

9. As to claim 2, Ismael fails to teach a tree as claimed. However, Wilson teaches the predefined organizational structure comprises a monitor tree, the monitor tree representing a hierarchical relationship between each of the resources monitored by each of the MBeans (¶ 59). It would have been obvious to one of ordinary skill in the art at the time Applicant's invention was made to combine these teachings because both teach managed objects.

Art Unit: 2194

10. As to claim 3, Ismael combined with Wilson teach the cluster integration logic comprises a plurality of monitor MBeans arranged in a hierarchical tree structure, each of the monitor MBeans associated with at least one of the runtime MBeans, each of the monitor MBeans to receive the resource data from its associated runtime MBean

(Ismael: col. 5 lines 18 – 36; col. 6 lines 10 – 47; Wilson: ¶ 59).

11. As to claim 4, Ismael combined with Wilson teach a management interface to display the resource data in a graphical structure representing at least a portion of the hierarchical tree structure (Ismael: col. 9 lines 10 – 43; Wilson: ¶ 59).

12. As to claims 5 and 6, see the rejection of claims 12 and 18.

13. As to claim 7, Ismael combined with Wilson teach a connector associated with each MBean server to communicatively couple each MBean server to the cluster integration logic (Wilson: ¶ 61, 68).

14. As to claims 9 – 11, 13, 15 – 17 and 19, see the rejection of claims 2 – 4 and 7.

### ***Conclusion***

15. The prior art made of record on the P.T.O. 892 that has not been relied upon is considered pertinent to applicant's disclosure. Careful consideration of the cited art is required prior to responding to this Office Action, see 37 C.F.R. 1.111(c).
